BUREAU OF LAND MANAGEMENT MEDFORD DISTRICT OFFICE 3040 BIDDLE ROAD MEDFORD, OREGON 97504

DECISION RECORD/RATIONALE/FONSI Cathedral Hills Trail Reroute and Construction (EA # OR110-03-15)

I. DECISION

The decision is to implement the proposed action for the Cathedral Hills Trail Reroute and Construction project as described in its environmental assessment (EA). Implementation of this decision will include all project design features as described in the EA. As noted in the proposal, the trail will be open to day use hiking, mountain biking and equestrian use. It will *not* be open to motorized use, overnight camping or campfires.

II. RATIONALE

Rerouting, improving and lengthening portions of the trail will:

- Prevent or reduce public use on private land
- Prevent or reduce erosion and sedimentation
- Encourage use on official trails
- Increase area access.

This action incorporates project design features which minimize potential short and long term adverse effects of the actions to be implemented. No adverse cumulative effects have been identified.

The No Action alternative was rejected because it does not meet the Medford District Resource Management Plan (RMP) objective for developing additional recreational opportunities on BLM lands.

Throughout scoping and the public comment period, 14 comments were received, all in support of the project. Some thought efforts to build, improve or link trails should be focused in other areas of the Cathedral Hills trail system. One thought some trails should be designated for a single use to avoid accidents between different types of users (e.g., between bicyclists and hikers). One urged reducing the fire hazard resulting from cut vegetation during project implementation.

This decision is consistent with the Medford District Resource Management Plan, the Record of Decision and Standards and Guidelines on Management of Habitat for Late-Successional and Old-Growth Forest Related Species Within the Range of the Northern Spotted Owl and the Record of Decision and Standards and Guidelines for Amendments to the Survey and Manage, Protection Buffer, and other Mitigation Measures Standards and Guidelines. This decision is also consistent with the Endangered Species Act; the Native American Religious Freedom Act; other cultural resource management laws and regulations; Executive Order 12898 regarding Environmental Justice; and

Executive Order 13212 regarding potential adverse impacts to energy development, production, supply and/or distribution.

The project is consistent with and promotes the goals of the RMP by pursuing "recreation opportunities that will benefit local community economic strategies consistent with BLM land use objectives" (RMP p. 63). This project is also consistent with the Bureau of Land Management's Strategic Plan for FY2000-2005, specifically mission goal 1.1 which is to "Provide opportunities for environmentally responsible recreation."

III. FINDING OF NO SIGNIFICANT IMPACT

Based on information contained in the EA, the project's record, and on comments received to date from the public regarding the project, it is my determination that the proposed action will not result in significant impacts to the quality of the human environment. During scoping and the public comment period, those who commented shared their preferences on how to implement the project or proposed additional objectives, but no new impacts were brought to light that would indicate a need for further analysis. This project does not constitute a major federal action having a significant effect on the human environment. An environmental impact statement (EIS) is not necessary and will not be prepared.

This conclusion is also based on a consideration of both the context and intensity of the impacts of the selected action(s) (40 CFR 1508.27). **Context** refers to analysis of environmental consequences at various social or geographic scales. For this project, impacts were assessed at both the site-specific and 5th field watershed scales. **Intensity** refers to the severity of impacts. Conclusions regarding intensity are supported by the following findings:

- 1) Impacts can be both beneficial and adverse and a significant effect may exist regardless of the perceived balance of effects. Both adverse and beneficial impacts will result from the project. Both have been considered in concluding that there will be no impacts at the 5th field watershed scale and inconsequential impacts at the site-specific scale for the following issues (resources not mentioned are expected to have no impacts at any scale): soil compaction, erosion, sedimentation, noxious weed dispersal, wildfire hazard and wildlife disturbance.
- 2) The degree of the impact on public health or safety. No adverse effects to public health or safety have been identified. Well marked, maintained trails that replace unauthorized, unmarked poorly maintained trails benefit public safety.
- 3) Unique characteristics of the geographic area. A unique characteristic is the close proximity of a largely undeveloped tract of forest to an urban area. The project is designed to enhance the recreational experience in this forested area.
- 4) The degree to which the effects on the quality of the human environment are likely to be highly controversial. There is no indication of any highly controversial effects on the quality of the human environment.
- 5) The degree to which the possible effects on the human environment are likely to be highly uncertain or involve unique or unknown risks. There is no indication that the effects on the human environment are highly uncertain and/or involve unique or unknown risks.

- 6) The degree to which the action may establish a precedent for future actions with significant effects or represents a decision in principle about a future consideration. The action is not precedent setting. Trail building and improvement is a common and frequent activity.
- 7) Whether the action is related to other actions with individually insignificant but cumulatively significant impacts. There is no indication that the actions will appreciably contribute to any cumulative impacts at the site-specific or watershed scale.
- 8) The degree to which the action may adversely affect National Historic Register listed or eligible to be listed sites or may cause loss or destruction of significant scientific, cultural or historical resources. There is no indication that the action will cause loss or destruction of any scientific, cultural, or historical resources.
- 9) The degree to which the action may adversely affect ESA listed species or critical habitat. No ESA listed species or ESA identified critical habitat have been found in the project area.
- 10) Whether the action threatens a violation of environmental protection law or requirements. There are no indications that the action will violate any environmental protection law or requirement.

IV. ADMINISTRATIVE REMEDIES

This decision is a forest management decision. Administrative remedies are available to those who believe they will be adversely affected by this decision. Administrative recourse is available in accordance with BLM regulation and must follow the procedures and requirements described in 43 CFR 5003. Administrative Remedies.

In accordance with BLM Forest Management Regulation 43 CFR 5003.2 (a, c), the effective date of the decision will be the date of publication of the Notice of Decision and Finding of No Significant Impact (FONSI) in the Grants Pass Daily Courier. Publication of this notice will establish the date initiating the protest period provided for in accordance with 43 CFR 5003.3. Any contest of this decision should state specifically what portion or element of the decision is being protested and cite the applicable CFR regulations.
